

Cross-zone distribution of thermal persistence coefficient a_z

Cross-zone distribution of outdoor-temperature coefficient b_z

Cross-zone distribution of additive term c_z

Q25-Q75 (IQR)
 P05-P95 range
 Median
 Mean
 Individual zone estimate

Distribution-based diagnostic view across zones. According to the first-order thermal model, a_z and b_z are dimensionless, c_z is an additive temperature term, and g_z expresses the temperature response per unit of the identified effective HVAC input u_z .
